The trophies from the list above will be considered (one by one or simultaneously) if taken personally by a nominee according to the actual hunting rules at the areas of natural areas of their inhabitation. The claimed trophies must be obtained in open areas.

The prize “Sheeps of the World” is given for those, who got 12 different species (or subspecies) from the list above containing goats of the World.

The Sheep of hybrid origin #23 is excluded from the prizes for the 12 Sheeps or Super 20, however, it may be accepted for the competition of Super 30 or Super 40.

*Due to existing law limitations for the hunt on these species, such a trophy may be accepted only if the special permission, given by a competent governmental department from the country of the trophy origin, is present. Moreover, these species may be accepted for the rating tables as a photo trophy, but only in Super 60.

Though turs are included in to both lists: goats and Sheeps, they are taken in to account on the general rating only once.
